OPmobility wins award to supply a major Chinese OEM with its innovative fuel tank technology for hybrid vehicles

OPmobility has been selected by a major Chinese automotive manufacturer to supply its innovative INWIN 2.0 pressurized fuel tank technology in China. The award covers the plug-in hybrid electric vehicle (PHEV) version of a new-generation compact SUV platform designed for local market and export to ASEAN and Middle East markets.

This award marks the first application of OPmobility's INWIN 2.0 technology for this customer. Designed for plug-in hybrid vehicles, this fuel system maintains the pressure within the tank, including when the vehicle operates primarily in electric mode. These pressurized fuel tanks are produced using standard co-extrusion blow molding machines, providing automotive manufacturers with an efficient and competitive solution for plug-in hybrid vehicles.

Throughout its long-standing partnership with this major Chinese OEM, OPmobility has provided advanced fuel system solutions, strong industrial capabilities, and close engineering support. This latest success confirms OPmobility's position as a trusted technology partner for global automotive manufacturers. It also strengthens the commercial potential of INWIN 2.0 in China and internationally, as demand continues to grow for reliable solutions adapted to plug-in hybrid vehicles.

Youssef Souiba, President of OPmobility's C-Power Business Group, stated: "*This award with a major Chinese OEM recognizes our ability to adapt to evolving market dynamics, and to support our geographical diversification strategy. By expanding the deployment of INWIN 2.0 in China and internationally, we are providing automotive manufacturers with a competitive innovation that contributes to reducing vehicle emissions and we are advancing the transition toward a more sustainable mobility.*"

About OPmobility

OPmobility is a world leader in sustainable mobility and a technology partner to mobility players worldwide. Driven by innovation since its creation in 1946, the Group is today composed of four complementary Business Groups that enable it to offer its customers a wide range of solutions: exterior and lighting systems, complex modules, energy storage systems and battery and hydrogen electrification solutions. OPmobility also offers its customers an activity dedicated to the development of software, OP'nSoft.

With economic revenue of 11.5 billion euros in 2025 and a global network of 152 plants and 40 R&D centers, OPmobility relies on its 38,100 employees to meet the challenges of sustainable mobility.

OPmobility is listed on Euronext Paris, compartment A. It is eligible for the Deferred Settlement Service (SRD) and is included in the SBF 120 and CAC Mid 60 indices (ISIN code: FR0000124570). www.opmobility.com
